PROJECT REPORT

TITLE PAGE:

Name: Chhavi Sharma

Registration number: 25BCE10242

Branch: Computer Science (Core)

Section: 2025-2029

Course Code: CSE0001

Course Title: Digital Literacy

Date: 31 March 2026

INTRODUCTION:

Digital literacy is an essential skill for students in today's technology-driven world. It helps individuals use digital tools effectively, communicate professionally, and stay safe online. This project was designed to develop awareness about digital platforms, professional communication, and cyber safety. As part of the assignment, I completed five different tasks that focused on creating an infographic, building a digital portfolio, exploring coding platforms, drafting professional emails, and understanding cybercrime**.**

In the first task I have used '**Canva'** to create single infographic that covers three topics which are 'What digital literacy is?' , 'Useful digital tools for students' and 'Safe internet practices' .These topics are important for a student to know about as all these things are important for us in our daily digital world .All this is connected to digital literacy and tell us about online internet safety and the true purpose of digital tools and services and how they are important for us .

In the second task I have created accounts on three platforms which are GitHub, LinkedIn and Kaggle. I have filled the education section with my current degree, institution and expected graduation year on LinkedIn. Then I have taken screenshots of those profiles and added then in a folder.

In the third task I have created an account on Hacker Rank and then solved a beginner level challenge. After that I have taken its screenshot and added it to the folder.

In the third task I also created a Google Form with five questions in which three of them were MCQS and 2 and short answer questions.

In the fourth task I have written two professional emails on the topics. 'An email from a student to their professor requesting an extension on an assignment submission deadline' and 'An email from a student to an internship coordinator at a company, expressing interest in summer internship opportunities ' which followed all professional email rules.

In forth task I have also created a social media Do's and Don'ts checklist which have five-five points of both the sides.

In fifth task I have created awareness case study and prevention guidelines on the topic: Cyberbullying.

In the fifth task I have also created a checklist on the topic: ‘Stay Safe Online’ with 8 specific, actionable prevention tips relevant to college students in India. In this there were two tips which were specific to financial/UPI safety. It also included the reporting channel: National Cyber Crime Petrol and Helpline 1930.

TASK 1

For Task 1, I created a Digital Literacy Awareness Infographic using Canva. The infographic highlights the importance of digital literacy for students and explains how digital tools can support academic learning. It includes key points such as safe internet usage, maintaining privacy, identifying fake information, and building a professional online presence.

I have used ‘**Canva’** to create single infographic that covers three topics which are ‘What digital literacy is?’ , ‘Useful digital tools for students’ and ‘Safe internet practices’ .These topics are important for a student to know about as all these things are important for us in our daily digital world .All this is connected to digital literacy and tell us about online internet safety and the true purpose of digital tools and services and how they are important for us .

The design was structured into different sections to make the information clear and easy to understand. I used icons, colours, and short bullet points to improve readability. The infographic also included examples of useful tools like cloud storage, collaboration platforms, and communication applications that students can use in their daily academic activities.

While creating the infographic, I focused on making it visually attractive and informative. One challenge I faced was selecting the most important information and fitting it into a single page without overcrowding the design. This task improved my creativity and helped me understand how to present information visually. Overall, it enhanced my awareness of digital literacy concepts and their practical importance.

TASK 2

In Task 2, I created and updated my student digital portfolio on GitHub, LinkedIn and Kaggle. On GitHub, I created a profile README that includes my name, branch, and learning goals. This helps in showcasing my projects and technical skills. On LinkedIn, I added my educational details and created a professional profile to connect with peers and professionals. I also explored Kaggle to understand its role in skill development.

Each platform serves a different purpose. GitHub is useful for storing and sharing projects, LinkedIn helps in professional networking, and other platforms support learning and practice. Creating these profiles helped me understand the importance of building a strong online presence early in my academic journey.

Over the next four years, I plan to use these platforms regularly to upload projects, learn new skills, and connect with industry experts. This task improved my understanding of digital portfolios and how they contribute to career growth. It also encouraged me to maintain professionalism in my online profiles.

In short I have created accounts on three platforms which are GitHub, LinkedIn and Kaggle. I have filled the education section with my current degree, institution and expected graduation year on LinkedIn. Then I have taken screenshots of those profiles and added then in a folder.

TASK 3

For Task 3, I explored coding and collaboration platforms. I created an account on Hacker Rank and completed a beginner-level coding challenge. This helped me understand basic programming concepts and improved my logical thinking. I also received passed, which motivated me to continue practicing coding.

Additionally, I created a Google Form quiz on digital literacy topics. The quiz included multiple-choice and short-answer questions related to online safety, digital tools, and responsible internet use. I shared the form and reviewed responses, which helped me understand how digital tools can be used for academic collaboration.

This task improved my coding skills and introduced me to new online learning platforms. It also showed me how Google Forms can be used to create quizzes and collect feedback easily. Overall, this activity enhanced my ability to use digital platforms for both learning and collaboration. It also encouraged me to practice coding regularly and use online tools effectively for academic purposes.

In short in the third task I have created an account on Hacker Rank and then solved a beginner level challenge. After that I have taken its screenshot and added it to the folder.

In the third task I also created a Google Form with five questions in which three of them were MCQS and 2 and short answer questions.

TASK 4

In Task 4, I learned how to write professional emails and follow proper email etiquette. I drafted two emails: one requesting an extension for assignment submission and another expressing interest in a summer internship. Both emails included a clear subject line, professional greeting, structured body, and proper closing.

I also created a social media do’s and don’ts checklist for responsible online behaviour. This checklist emphasized maintaining privacy, avoiding inappropriate content, and communicating respectfully.

One situation where poor digital communication can cause problems is sending unclear or informal emails to professors. This may create misunderstandings or appear unprofessional. Such issues can be avoided by reviewing emails before sending and using polite language. This task improved my professional communication skills and taught me the importance of digital etiquette.

In short in the fourth task I have written two professional emails on the topics. ‘An email from a student to their professor requesting an extension on an assignment submission deadline’ and ‘An email from a student to an internship coordinator at a company, expressing interest in summer internship opportunities ‘ which followed all professional email rules.

In forth task I have also created a social media Do’s and Don’ts checklist which have five-five points of both the sides.

TASK 5

For Task 5, I studied cyberbullying. This cybercrime involves tricking users into sharing personal or financial information. Attackers usually send fake messages or links that appear genuine. When victims click these links, their data may be stolen. Students are often targeted because they may not recognize suspicious content.

What surprised me most was how easily people fall victim to these scams due to lack of awareness. The consequences include financial loss, identity theft, and privacy breaches. Through this task, I learned the importance of verifying links, using strong passwords, and avoiding sharing sensitive information online.

One habit I will personally change is being more cautious before clicking unknown links and regularly checking privacy settings. This task increased my awareness of cyber threats and helped me understand how to stay safe online.

In short in fifth task I have created awareness case study and prevention guidelines on the topic: Cyberbullying.

In the fifth task I have also created a checklist on the topic: ‘Stay Safe Online’ with 8 specific, actionable prevention tips relevant to college students in India. In this there were two tips which were specific to financial/UPI safety. It also included the reporting channel: National Cyber Crime Petrol and Helpline 1930.

CONCLUSION:

This project helped me understand the importance of digital literacy in academic and professional life. Through various tasks, I learned about digital tools, professional communication, coding platforms, and cyber safety. The activities improved my ability to use online platforms responsibly and effectively. I also developed skills in designing, communication, and collaboration.

Overall, this project enhanced my confidence in navigating the digital world. The knowledge gained will help me build a strong digital presence and protect myself from online risks. I will continue applying these skills throughout my academic journey and future career.
